

AIRPORT BEACON & WIND CONE PLACEMENT

CONSTRUCTION ENGINEERING INSPECTION (CEI)

PROJECT DESCRIPTION

Suwannee County intended to replace the rotating beacon and lighted wind cone at the Suwannee Airport. NFPS provided CEI services.

During the Construction Phase, NFPS did the following:

- Represented the County at the Pre-Construction Conference;
- Provided general consultation and advice to the County with respect to the construction of the project;
- Performed monthly inspections of the project while construction is in progress to observe the progress, workmanship and quality of material for conformity with the plans, specifications, and construction schedule and provided appropriate reports to the County;
- Reviewed and approved, if acceptable, for compliance with the design concept of the project and compliance with the information given in the construction contract documents, all detailed construction shop and erection drawings and materials samples submitted by the contractors;
- Performed quality assurance testing of materials as may be necessary for the proper construction of the project;
- Reviewed reports of field inspections and testing activities performed by the contractor, testing laboratory or others; and
- Prepared routine change orders or routine supplemental agreements as were necessary during construction of the work.

NFPS performed a final inspection with representatives of the County and appropriate governmental agencies of the completed project; and prepared construction contract change orders or supplemental agreements involving major changes or revisions of the completed construction plans, specifications or to construction operations which are not attributable to any error or omissions on the part of the engineer.

NFPS prepared “as-built” drawings based on information provided by the construction contractor and the part-time inspector.

Lastly, NFPS performed the services of a part-time Resident Project Representative to perform observations of the performance of the work of the contractor during the construction of the project.
